

ABOUT US

It is T3W's mission and commitment to help our clients develop strategies to optimize their use of data, space and resources, resulting in maximum benefits: saving time and money. We deliver quality data and analysis to support our clients' daily facility operations, planning and compliance programs.

CORE COMPETENCIES

Realize Success & Improve Efficiency

Business Enterprise Solutions - T3W employs enterprise solutions that connect users and departments with data, technology, and business processes to create quality and efficiency throughout the organization.

Data & Quality Assurance Services, including Mapping and Charting Solutions (M&CS) - T3W commits to providing the highest quality data encompassing all aspects — collection, creating, standardization, integration and analysis. We assist customers in implementing and optimizing M&CS within their organization so they can track workflows, ensure data integrity, and reduce cycle time on repetitive tasks, thus increasing efficiency and cost effectiveness. Our approach enables clients to achieve maximum quality with their data and programs by assisting with implementation strategies, creating templates, configuring customer work spaces, developing workflows, and providing consultative training to ensure successful integration with existing processes.

Facilities Data Management - T3W collects, validates, and standardizes data to create quality geo-enabled products in support of managing facilities—base maps, interior/exterior utilities, compliance programs, inspections/maintenance requirements, web-based applications, and proven customized training and implementation plans to accelerate the learning curve.

Environmental & Safety - T3W provides support in environmental restoration and compliance, providing guidance for remediating hazardous waste sites in accordance with the federal requirements, e.g. CERCLA, RCRA, and various state environmental laws. We facilitate environmental training across a broad range of environmental areas including Green and Sustainable Remediation. We prepare Title V compliance documents, including Title V reports and permit applications, as well as applicable plans, reports, inventories, health risk assessments (HRAs), public notification plans, and risk reduction audits and plans (RRAPs).

Space/Assets: Planning, Allocation and Optimization - T3W shows clients how best to optimize their use of space and assets—facilities, personnel, land, or equipment using a unique modeling tool initially developed by NASA. Taking into consideration use of available space, resource needs and compatibility, synergy, move costs, and timeline, T3W can help clients develop strategic plans and interim tactical plans to support short and long term goals.

CLIENTS SERVED (Representative List)

Naval Medical Center San Diego: Space Management, Facilities Management, Asbestos and Environmental Mapping, Parking Study, Customized Training, Document Management
